Astragalus8000 90 vegetable capsules / Code FE1157

The astragalus root (*Astragalus membranaceus*) is well known and used traditionally in China and Eastern Asia. Its active principles comprise a combination of polysaccharides, triterpenes, glycosides, flavonoids, amino acids and trace minerals. Astragalus is a good adaptogenic; it helps reinforce and strengthen the immune system. The isolates within astragalus also contribute to vitality and anti-ageing.

FORMAT:

90 vegatable capsules

FORMULA

Ingredients: astragalus root powder extract (*Astragalus membranaceus*), anticaking agent: magnesium salts of fatty acids, vegetable capsule (glazing agent: hydroxypropylmethylcellulose; purified water).

| Nutritional information: | 2 capsules |
|--|------------|
| Astragalus root (Astragalus membranaceus) (16% polysacchariedes) | 1.000 mg |

Cautions:

Consult a health-care practitioner before using if you are pregnant or breast-feeding or if you have an autoimmune disorder.

Recommended daily doce:

1 capsule twice daily. Consult a health-care practitioner for use beyond 2 months. Do not exceed the stated recommended daily dose.

Indications and uses:

Different studies have shown that Astragalus 8000 can be of help for:

- Inhibiting viral infection, increasing immune function and inhibiting cancer cell growth.
- It has an excellent positive effect on the immune system and is of great help for optimizing immune function since it increases defences and tones the body. Useful for the flu and the common cold.

INGREDIENTS:

<u>ASTRALAGUS</u>: Astragalus is a complex combination of polysaccharides, glycosides, triterpenes, flavonoids, amino acids and minerals. Its extract seems to restore T cell counts. Astragalus polysaccharides stimulate adrenal-pituitary cortical activity and restore red blood cell formation in bone marrow.

Upon stimulating the natural production of interferon and increasing the number of T cells, astragalus has been proven useful for treating Alzheimer's disease, as chemotherapy support, for treating the common cold and sore throat, and for improving immune function and the body's response to infection ⁽¹⁻⁶⁾.

Polysaccharides have the ability to bind to M-immunoglobulin cells that express as B cells. When polysaccharides bind to these cells, B cell and macrophage proliferation is induced, making astragalus an ideal option for immune modulation. It can have anti-tumour and adaptogenic effects ^(1,7,8).

One study suggests that astragalus can be effective for relieving the effects of viral infections ⁽⁹⁾. Other studies have shown that astragalus polysaccharides can inhibit the growth and proliferation of cancer cells in the colon ^(7,8,10).
